ABSTRACT

Gul-e-Surkh (Rose flower) is the Persian name for the Rosa damascena Mill. In Unani system of medicine Rose flower is used for medicinal purposes. Ibn Sina considers Gul-e- Surkh as one of the best drug for liver. Rose flower in various doses form and/or in combination with many other drugs are indicated in various disease. It is commonly being used as general tonic for Lungs, Stomach, Intestine, Liver, Rectum, Kidney, Heart, and Uterus. Fresh flowers are purgative and dried one is astringent in properties. In this review article authors try to encompass the therapeutic indication of Rosa damascena Mill described in Unani literature.

INTRODUCTION

Gul-e- Surkh (Rosa damascena Mill) belongs to family Rosaceae. Under the name of Ward, the flower has been mentioned in Arabic and Persian literature, white wild rose, red wild rose, red garden rose etc. The red garden rose appears to be Rosa damascena. Roses are mentioned by the old Greek writers and among the ancients. Roses have innumerable solar myths. Roses were said to be introduced into Europe by Crusaders. Its several varieties have been discussed by Al- Biruni, one of the great Arabian scholar. [1, 2, 3]

Vernacular Names [2]

Arabic: Warde Ahmar
English: Bussora Rose, Damascus Rose
Hindi: Gulab
Malyalam: Penimirpush
Persian: Gule surkh
Sanskrit: Atimanjula
Tamil: Irosa
Telugu: Gulab

Scientific Classification [2]

Kingdom: Plantae
Division: Magnoliophyta
Class: Magnoliopsida
Order: Rosales
Family: Rosaceae
Genus: Rosa
Species: Rosa damascene

Habitat and Distribution [2]

There is a general belief that it is derived from native European species but from an oriental source and it is possible that the mild stock has been correctly recognised a plant of Persia, Assyria and the East Caucasian regions. The species cultivated all over India for the production of otto is Rosa damascene. It was introduced to Europeans from Asia Minor.

Botanical Description [2]

A small shrub, 3-6 ft high, with numerous erect branches, rather densely covered with prickles of various sizes. Stem usually with numerous stout and hooked prickles, sometimes mixed with glandular bristles. Leaflets usually 5, sometimes 7, ovate oblong, serrate, more or less pubescent beneath, 2.5-6.3 cm. long; stipules scarcely dilated, sometimes pectinate; petioles prickly. Flowers
usually corymbose, double, red, pink or white, sometimes striped; Sepals deciduous.

**DESCRIPTION IN UNANI LITERATURE**

It is a flower of famous plant called as Damask rose. The flower has a good odour, taste is sweet followed by slightly bitterness but the bitterness is decrease after dryness. Flower is mostly red in colour but sometime may be white or pink also. Flower is of two kind; Bustani (cultivated) and Jangli (wild). Wild flower has less number of petals and least odorous than that of cultivated.

**Parts used**[3,4,5]
- Flowers,
- Flower buds, petals, stamens,
- Oil and aqua of rose

**Mizaj (Temperament)**[3,4,5]

Temperamentally Gul-e-Surkh is considered as Motadil (Equable) and Cold 20-Dry 20 (cold and dry in second degree).

**Pharmacological actions**[3,4,5,6,7,8,9,10,11,12,13,14]

Fresh flowers are more laxative but dry are astringent. It is regarded as refrigerant, strengthening the vital organs, stomach and intestine, has compound action of causing mild purgation as well as astringency. Flowers help in curing burning sensation, bad odour from mouth, for improving appetite and relieving headache. It decreases the excess Ratubat-e-Medah (gastric secretion) and is used as stomachic. It is mainly claimed for following actions.

- Mubarrid (Cold)
- Khafif Mulayyen (Mild Laxative)
- Muqawwie Bah (Aphrodisiac)
- Muqawwie Qalb (Cardio Tonic)
- Dafe Hum (Antipyretic)
- Qabiz (Constipative)
- Mulaiyyin (Laxative)
- Muqawwie Medah (Stomachic)
- Muqawwie jigar (Liver Tonic)

Now we are going to mention its uses and indication more specifically i.e., system wise.

**Head & Neck**

Paste of fresh flower is Beneficial in headache and meningitis and in general it is nervine tonic. Its syrup resolves the quotidian fever

**Eye**

Effective in conjunctivitis, eye fatigue & pain.

**Gastro intestinal Tract**

Rose flowers are considered as best food supplement for stomach and liver. Dried flowers are very effective in bleeding dysentery. Its oil is effective in gastritis. Its Syrup increases the tone of muscles of stomach. Its syrup and Gulkand (a preparation made up of honey and Rose flowers) is beneficial in Cholecystitis. Sitz bath of Rose flower is effective in anal ulcer and anal pain. Its decoction is beneficial in peptic ulcer and hemorrhoids. It resolves the hepatic obstruction.

**Teeth and Gum**

Strengthenst the muscles of Gum

**Throat and Buccal Cavity**

It is helpful in mouth ulcer and stomatitis

Gargle from decoction of rose flowers is helpful in sore throat and hoarseness of voice.

**Respiratory System**

Paste of Rose flower and syrup of Banafasha (Viola odorata) or Zufa (Hyssopus officinalis) in linctus form is effective in Asthma. It is effective in haemoptysis.

**Cardiac Vascular system**

It is very effective in palpitation and syncope.

**Boil & Wart**

Local application of Paste made up of rose flowers is beneficial in wart and Boil. It resolves the inflammation.

**Wound & Ulcer**

Its paste is helpful in lesion of groin region. Dusting of powder of dried flower is done over wound and ulcer for its healing property. Dried powder of rose flower is also helpful in healing of scab of chickenpox.

**Uterus**

Decoction of dried rose flowers is helpful in uterine pain (due to hotness). Paste and decoction (as sitz bath) of rose bud is effective in leucorrhoea and it strengthen the vaginal muscles.

**Cosmetic uses**

The rose oil and rose water both are used as deodorant. It controls the excessive sweating, it is used on face and body skin as a rejuvenator. It moistens and brightens the skin. It is helpful in generalized itching. It soothes the rough skin by shedding off the dead tissues.

**Toxicity**

No known toxicity reported, its aroma may cause catarrhal affection. It causes cough and thirst.

**Correctives[3,4,5]**

Anisoon (Pimpinella anisam), Habb-ul-Zam (Egyptian nut) and Honey is used to counter its side effect if it used in excess.

**Substitutes[3,4,5]**

Banafsha (Violo odorata) an is used for corrective if Gule-e-Surkh unavailable.

**Dose[3,4,5]**

5-7 gm (approx)

**Phytochemical Studies[2]**

Flower contain a bitter principal, tanning matter consist of cyanine (9-10% on dry weight basis); a yellow glycoside of quercetin and a yellow crystalline dyestuff, C15 H12O6 are also present. 2-Hydroxyursolic acid β-amyrin and methyl ursolate from stamen. Average and biggest oil contents of roses from India and North Africa were estimated as 0.051 and 0.08 % respectively. Oil of roses is a mixture of a stearoptene hydrocarbon. Volatile oil containing geranol, citronellol (rhodinol, neral,
eugenol and colourless stearoptine); the petals contains vitamin c, quercitrin, quercitrannic acid, gallic acid, caritine and red colouring matter.

SCIENTIFIC STUDY ON ROSE FLOWER
- Hydroalcoholic extract and essential oil of *Rosa damascene* causes analgesic and anti inflammatory effect in experimentally induced pain and inflammation mice.[15]
- The ethanolic and aqueous extract of *Rosa damascene* causes antitussive effect in experimentally induced cough in Guinea pig.[16]
- A comparative study of hypnotic effect *Rosa damascene* extract and Diazepam in mice was performed and the result showed that the ethanol extract and fraction of *Rosa damascene* prolonged the pentobarbital induced sleeping time.[17]
- In the in-vitro study, the aqueous fraction of *Rosa damascene* causes contractile response on ileum of Guinea pigs dose dependently.[18]
- The effect of methanol extract of *Rosa damascene* Mill was studied, in comparison to the α-glucosidase inhibitor acarbose, in normal and diabetic rats. The inhibition mode of this extract was examined and the result shows that *Rosa damascena* extract has an intensive inhibitory effect on α-glucosidase. Oral administration of extract of *Rosa damascene* Mill significantly decreased blood glucose after maltose loading in normal and diabetic rats in dose dependent manner.[19]
- Effect of the *R. damascena* essential flower oil (2.5-160 μg/ml) and its two constituent geraniol (0.2-3.2 μg/ml) and citronellol (0.8-6.4 μg/ml) were studied on rat ileum contractions induced by KCl, acetylcholine (ACh) and electrical field stimulation (EFS) and compared with standard drugs atropine and loperamide. The contractile response of EFS was mediated mainly through the intramural nerve plexuses, because its response was inhibited by loperamide and partially reduced by atropine. The essential oil concentration dependently inhibited the response to KCl (IC50=67 ± 8.4μg/ml) and EFS (IC50=47 ± 10.6 μg/ml). Geraniol (IC50=1.7 ± 0.15 μg/ml for KCl) and citronellol (IC50=2.9 ± 0.3 μg/ml for KCl) also had inhibitory effect on ileum contraction and both were more potent than the essential oil. It was concluded that *Rosa damascena* essential oil mainly had an inhibitory effect on ileum contractions and geraniol and citronellol had a major role in inhibitory effect of the essential.[20]
- The boiled extract of *Rosa damascena* Mill causes the laxative and prokinetic effects in rats.[21]

- The potential use of their essential oils as natural antioxidants and anti microbial leads to determine the antioxidant and antibacterial activities of fresh and spent *Rosa damascene* flower extracts. Antibacterial activity of the extract was determine by the agar diffusion method against 15 species of bacteria: *Enterobacter aerogenes*, *Aeromonas hydrophila*, *Enterococcus fecalis*, *Bacillus cereus*, *Escherichchia coli*, *Klebsiella pneumonia*, *Mycobacterium smegmatis*, *Proteus vulgaris*, *Pseudomonas aeruginosa*, *Pseudomonas fluorescens*, *Salmonella enteridis*, *Salmonella typhimurium*, *Staphylococcus aureus* and *Yersinia enterocolitica.[22]

METHODOLOGY
The databases used to get information from journals and articles are Google, Google Scholar, Scopus, PubMed and Science Direct. For the search of ancient and recent *Unani* literature author visited Library of National Institute of Unani Medicine (NIUM), Bangalore, India

SUMMARY
This is well known fact that the various medicinal plants describe in *Unani* system medicine play a vital role against range of diseases. Plants as a whole or their extracts have significant medicinal values.[23,24] In this study we simply describe the medicinal use of *Gul-e-Surkh* in *Unani* literature but only few of them have been evaluated on conventional parameter. So there is a need of hour to do more such research so as the medicinal use of *Gul-e-Surkh* may be maximise and generalised for the claimed disease and ailments.

ACKNOWLEDGEMENT:
Gracefully thanks to my guides Prof. Abdul Wadud and Dr. Najeeb Jahan for their encouragement, supervision and moral support, that eases my work to write this paper. I am heartily thankful to Dr Md Tanwir Alam for his suggestion & support in compiling and shaping this paper. The authors are also grateful to librarian and authors/editors/publishers of all those books, article and treaties from where the reference for this article has been taken.
